

Data Matters Strengthens Strongroom Cloud Services With Data Protection as a Service

Data Matters Transforms Businesses with Modern Data Protection

AMSTELVEEN, the Netherlands – September 18, 2019 – Data Matters today announced the availability of three new easy-to-adopt core data protection as a service (DPaaS) options to help enterprise and government organisations develop a cloud-enabled data protection strategy, regain control of copy data, reduce costs and improve operational efficiency.

Powered by Hitachi Content Platform (HCP) from Hitachi Vantara, Data Matters' flexible Strongroom offerings empower organisations to achieve data protection objectives and meet regulatory compliance obligations and data integrity requirements. These solutions deliver a comprehensive framework for backup and recovery, data repository, long-term retention and archiving, and disaster recovery.

Based on service-level agreements (SLAs) and as-a-service consumption, Data Matters' DPaaS customers may select from among three services: recovery copy, long-term retention, and disaster recovery. Each service has four service-class options: bronze, silver, gold and platinum.

Recovery Copy Service

Helps you define a service catalog based on RPOs, RTOs, backup and restore success rates, retention and backup copies. It ensures operational recovery in the event of data corruption to help organisations maintain data integrity.

Long-Term Retention Service

Provides a service catalog based on long-term retention requirements. Uses storage as a service to manage costs. Build on our recovery copy service to support your regulatory requirements for unstructured data.

Disaster Recovery Service

Create a customized service catalog based on stringent RPOs, RTOs, deployed technology, failover and level of disaster recovery testing for controlled availability. Safeguard your data from human error or natural disasters and protect against site failure or catastrophic loss of service.

About Data Matters

Data Matters offers cloud solutions and services for digital archiving, preservation, records management and data protection. Data Matters solutions and services are based on years of expertise, in-depth knowledge and industry-leading products and services from innovative and reliable technology manufacturers like Hitachi Vantara, Star Storage and scope solutions.

Hitachi Content Platform (HCP) is the core component of all Data Matters solutions. The HCP portfolio is a software-defined, cloud-ready platform based on object storage architecture. With near-infinite capacity and broad flexibility, HCP harnesses unstructured data growth and bridges traditional and emerging technologies to make data securely available anywhere, anytime.

HITACHI is a trademark or registered trademark of Hitachi, Ltd.
