

What is Emailbot?

Simplifai's Emailbot is an AI solution for handling large volumes of emails. It efficiently reduces the manual processing of emails and frees up time for more valuable work.

Emailbot with the help of Intelligent Process Automation can interpret unstructured content, decrease response time and execute tasks in CRM or back-office systems.

What makes Emailbot unique?

Emailbot is a no-code solution for automation and requires no technical skills to operate. It is easy to configure Emailbot in Simplifai Studio, a state-of-the-art platform for Intelligent Process Automation.

It is powered by AI to understand human communication using Natural Language Understanding and supports multiple languages. The bot can identify sensitive emails and forwards them to humans.

How does Emailbot work?

Reads

Receives, reads and interprets email content

Classifies

Classifies the email type based on the content and pre-defined categories

Extracts Data

Extracts key information like customer ID and case number

Performs Action

Facilitates necessary actions based on email's purpose

Increases customer satisfaction and business productivity

Simplifai's Emailbot can automate up to 90% emails automatically with only 3 weeks of training. The bot's performance further improves over time with regular training and Machine Learning.
